Mr. Zak McClendon  
Lead Game Designer  
Double Fine Productions, Inc.

Dear Zak McClendon:

I write to express interest in joining Double Fine as a gameplay programmer, as per the listing on your website. I'm currently a web developer at Ann Arbor T-Shirt company, a small local business. I'm also a college student studying Computer Science at the University of Michigan. In addition to my professional and academic profile, I have been practicing game programming for fun since I was sixteen and have been playing games for as long as I can remember. Between my job, schooling, and hobby, I have developed a diverse set of general programming and game development skills.

To bring to the Double Fine table, I have solid hobbyist experience using Unity, Unreal Engine 4, and SDL2, in addition to some 2D JavaScript libraries. Most notably Unreal Engine 4, of course, as that is the backbone of your current project Psychonauts 2. The project in which I used UE4 was a Ludum Dare game jam entry, a side scrolling puzzle platformer in which the player arranges mirrors to redirect beams of light with special abilities. For instance, the purple rays propel the player in their pointed direction. The game was developed mostly using Unreal's C++ interface and later I integrated the C++ functionality with Blueprint for quick prototyping. I found their Blueprint system surprisingly pleasant to work with.

In addition to game engine experience, I also fit the math skills requirement on your job posting. I taught myself OpenGL and the Rust programming language by creating a 2D batching sprite renderer that supports scale, rotation about a point, and hue adjustment on the shader level. In addition to my hobby projects, my web development profession has provided me 3 years of solid software engineering experience in general areas including databases, deployment, user interface, and error reporting. On the job, I wrote an image compositor for custom t-shirt mockups that outperforms ImageMagick by about 1.5x. In addition to speed, it also wins in stability, as the old compositor was prone to running servers out of memory.

See the enclosed resume for a more comprehensive overview of my programming repertoire. I like what you guys do at Double Fine, and I'd be honored to join you. I'll give you guys a call in a couple weeks when you've had time to think things through.

Sincerely,  
Nigel

# Nigel Baillie

**Objective:** Bring a unique perspective to video game design and development.

## Education

April 2018 Sept. 2016	University of Michigan	B.S.E. Computer Science Engineering
May 2016 Sept. 2012	Washtenaw Community College	Transferred to U-M

## Employment

Present Feb. 2014	<p>Intermediate Developer at Ann Arbor T-Shirt Company</p> <p><b>Languages:</b> Ruby, JavaScript, C++</p> <p><b>Technology:</b> Ruby on Rails, jQuery, React Native, AWS, Travis-CI</p> <p><b>Developed:</b> Quoting and order management tools</p> <p>Unified authentication across all apps</p> <p>Image compositor for t-shirt mockups</p> <p>Travis-CI integration for automated testing &amp; deployment</p> <p>Mobile app for quick pricing of custom garments</p> <p><b>Set up</b> Amazon Virtual Private Cloud with VPN access</p>
----------------------	--

## Hobby

Present 2011	<p>Miscellaneous Game Development</p> <p><b>Languages:</b> C, C++, Java, Scala, Rust, JavaScript</p> <p><b>Technology:</b> SDL2, Unreal Engine 4, Unity, Phaser.js, OpenGL</p> <p>Participated in 3 Ludum Dare competitions (solo) and 1 jam (team)</p> <p>Built efficient pixel-perfect 2D platformer collision detection system</p> <p>Implemented lockstep networking for 2D platformer</p> <p>Created small 2D sprite renderer in Rust using OpenGL</p> <p>Utilized runtime JVM bytecode injection to disable unit collision in Minecraft</p>
-----------------	---
